TL-03

# FOOD / SUPPLY CALCULATOR

**A practical worksheet for planning household food and essential consumables before an emergency.**

**THE NUTRITIONAL BASELINE RULE**
An emergency cache is only effective if your family can digest it under stress without power or refrigeration. Sit down with a pen and a standard calculator on a calm day to audit your physical reserves. Never assume commercial supply chains, grocery stores, or electronic payment grids will stay operational during a crisis.

## 1. HOUSEHOLD COMPONENT TRACKING

| Household Member / Name (Optional) | Age Group / Operational Notes | Dietary Constraints or Medical Needs |
|---|---|---|
| | | |
| | | |
| | | |
| | | |

## 2. CHOOSE A PLANNING PERIOD

■ 72 Hours (Absolute Short-Term Floor)
■ 7 Days (Standard Local Disruption Window)
■ 14 Days (Extended Operational Gap)
■ 30 Days (Severe Long-Term System Block)
■ Other Selected Horizon: _____ | Target Review Date: _____

## 3. PRE-CALCULATION VERIFICATION GROUND RULES

■ **Prioritize Existing Diets:** Only store and count foods that your household members actively eat on a normal day.
■ **Isolate Animal Caches:** Track pet food, veterinary needs, and animal water lines on completely separate inventory registries.
■ **Assume System Losses:** Always execute calculations assuming zeros for grid electricity, refrigeration, and tap water loops.

## 4. DAILY CALORIC LOGISTICS MATRIX

**THE 2,000 KCAL SAFETY THRESHOLD:** Compute your required storage targets using a baseline floor of 2,000 Calories (kcal) per adult per day. Focus entirely on shelf-stable macro asset classes that require minimum or zero fuel to prepare.

| Food Group / Asset Class | Target Volume (Per Adult / Day) | Household Target Volume | Usable Volume On Hand | Net Deficit Gap to Purchase |
|---|---|---|---|---|
| Grains (Rice, Oats, Crackers) | 8 oz / 225 g | _____ | _____ | _____ |
| Canned Proteins (Tuna, Meat) | 6 oz / 170 g | _____ | _____ | _____ |
| Fats / Nut Butters / Seeds | 2 oz / 55 g | _____ | _____ | _____ |
| Canned Fruits & Vegetables | 10 oz / 280 g | _____ | _____ | _____ |
| Shelf-Stable Milk / Alternates | 8 fl oz / 235 ml | _____ | _____ | _____ |
| Comfort Foods / Basic Snacks | Custom Baseline | _____ | _____ | _____ |
| Infant / Medical Restrictions | Critical Priority | _____ | _____ | _____ |

## 5. COMPUTE COMPONENT VARIABLES

**THE MATHEMATICAL CALORIC MATRIX LOOPS:**

Formula 1: Total Household Count = _____ Adults + _____ Children + _____ Infants

Formula 2: Target Horizon = _____ Total Planning Days chosen from Category 2.

Formula 3: Net Volume Required = Total Household Target Volume **MINUS** Usable Volume On Hand.

Note: If the calculation returns zero or a negative value, mark that class covered but verify execution expiration stamps.

## 6. HYGIENE & PREPARATION ACCESSORIES LOG

A food reserve is entirely useless without physical tools to open, prepare, and cleanly consume it. Track your supporting hardware consumables with the exact same rigor applied to your nutritional parameters.

| Consumable Item / Tool Class | Target Registry Count | Volume Verified On Hand | Net Supply Gap to Fill | Priority Rank |
|---|---|---|---|---|
| Manual Can Openers (P-38 or Hand Tool) | 2 Functional Units Min. | _____ | _____ | _____ |
| Heavy-Duty Trash Bags (Sanitation Loop) | 30 Bags Minimum | _____ | _____ | _____ |
| Disposable Prep Gloves (Nitrile / Large) | 1 Sealed 50-Ct Box | _____ | _____ | _____ |
| Liquid Dish Soap & Sanitizing Agent | 2 Containers Standard | _____ | _____ | _____ |
| Toilet Paper / Sealed Hygiene Rolls | 2 Rolls Per Week / Person | _____ | _____ | _____ |
| Approved Non-Electric Cooking Fuel | 30-Day Operational Scale | _____ | _____ | _____ |
| Water-Resistant Safety Matches / Lighters | 4 Independent Sources | _____ | _____ | _____ |

## 7. SECURE PHYSICAL CACHE STORAGE BLUEPRINT

■ **Climate Controls:** Store all bulk dry commodities in thick, food-safe plastic containers clear of damp concrete lines, direct radiant sunlight, and chemical volatile fumes.
■ **Isolation Parameters:** Keep fuel supplies, liquid bleaches, chemical cleaning acids, and industrial solvents stored in a completely separate structural sector from your food buffers. Never let toxins leak onto calories.
■ **Mechanical Verification Checklist:**
[ ] Checked manual can opener blade teeth for rust or misalignment lines.
[ ] Verified all matches are locked inside an absolute airtight, water-shielded polymer match case.

## 8. CRITICAL LOGISTICS ACTION MATRIX

Turn your net deficit values into crisp field acquisition markers. Assign accountability blocks cleanly.

| Priority | Target Acquisition Item / Storage Sector Action | Assigned System Owner | Absolute Target Deadline |
|---|---|---|---|
| RANK 1 | _____ | _____ | _____ |
| RANK 2 | _____ | _____ | _____ |
| RANK 3 | _____ | _____ | _____ |
| RANK 4 | _____ | _____ | _____ |
| RANK 5 | _____ | _____ | _____ |

## 9. RIGID STORAGE ROTATION & COMPLIANCE RULES

■ **The Panic-Proof Evaluation Rule:** Never taste-test questionable food to judge its condition. Visual sheens, rancid smells, and bulging canister seals are absolute signals of toxic failure. When in doubt, throw it out.
■ **Rotation Interval:** Pull this document binder tab out every six calendar months. Move items nearing their expiration dates directly into your daily kitchen pantry, and purchase fresh stock to preserve your emergency baseline margins.
