TL-02

WATER NEEDS CALCULATOR

A printable pre-crisis worksheet to map, calculate, and secure baseline household water reserves.

1. HOUSEHOLD POPULATION PROFILE

Complete this registry entirely with a pencil before running any calculation matrices. Identify every individual and domestic animal relying on this centralized baseline cache.

Full Name / Identifier	Age Group	Specific Medical, Dietary, or Care Needs

2. CHOOSE A DISRUPTION TIMELINE SCENARIO

Select one or more target horizons to compute your minimum essential storage volumes. Check the box of your active planning goal.

■ **24 Hours**	Short Interruption	Notes:
■ **72 Hours**	Extended Emergency Baseline	Notes:
■ **14 Days**	Long-Term Infrastructure Failure	Notes:
■ **30 Days**	Severe Grid Collapse Setup	Notes:

3. THE BASELINE WATER ALLOCATION STANDARD

The absolute standard public safety planning rate is **1 Gallon Per Person Per Day**. This functions as a baseline survival architecture split evenly for basic biological requirements: **0.5 Gallons for clean drinking** and **0.5 Gallons for food preparation and immediate handwashing**.

CRITICAL RATE MODIFIERS: Never ration water below safe thresholds. You must increase your baseline sizing calculations to **1.5 or 2 Gallons per day** if any of the following active conditions exist in your household profile:

- **Extreme Climates:** Ambient room temperatures above 90°F dramatically accelerate human dehydration rates.
- **Medical Vulnerabilities:** Nursing mothers, pregnant individuals, or family members experiencing active illness require significant hydration cushions.
- **Infants & Special Diets:** Formula mixing or clean tool rinsing consumes specialized water layers rapidly.

4. COMPUTE THE HOUSEHOLD WATER TARGET

Use the exact formula block below to find your mandatory storage volume. Complete the row that matches your chosen disruption timeline scenario from Section 2.

Scenario Horizon	Total People (A)	Gallons / Day (B)	Total Days (C)	Extra Pet/Medical (D)	TOTAL TARGET (AxBxC)+D
24 Hours			1		
72 Hours			3		
14 Days			14		
30 Days			30		

5. VERIFIED PHYSICAL STORAGE INVENTORY

Count only water containers that are clean, food-safe, and ready for immediate consumption. Do not count unverified or raw pool/creek water sources here.

Container Type & Physical Storage Location	Quantity (A)	Gallons Per Unit (B)	Total Stored Usable Gallons (AxB)
TOTAL VERIFIED USABLE RESERVE STORED:			**A: _____ Gallons**
CHOSEN TARGET SYSTEM VOLUME (From Section 4):			**B: _____ Gallons**
THE CRITICAL GAP TO FILL (Subtract A from B):			**GAP: _____ Gallons**

6. RIGID STORAGE AND SAFE-WATER CHECKLIST

■ **Food-Grade Verification:** Store water strictly inside heavy-duty, food-safe plastics labeled HDPE #2 or PET #1. Never reuse milk jugs; residual proteins cultivate toxic bacteria.
■ **Light & Chemical Isolation:** Keep all storage drums sealed and positioned away from chemical fumes, fuels, or direct sunlight to prevent plastic degradation.
■ **Evacuation Portability:** Store a subset of your reserve in small, 1-gallon or 5-gallon jugs that a family member can lift and transport rapidly if evacuation orders drop.
■ **System Turnover:** Label every container with its exact fill date using a permanent marker. Flush and refresh tap water reserves every six months completely.
■ **Main Line Cutoff:** If a boil-water notice or pressure drop hits your town, close your house's primary main intake valve immediately to isolate your clean pipes from municipal backflow.

7. AUXILIARY NON-DRINKING CONTINGENCY PLANNING

Map out separate secondary sources for tasks that do not require pure drinking water. Never consume questionable layers.

Operational Purpose	Designated Non-Drinking Source / Strategy	Estimated Volume Notes
Cooking & Rinsing		
Hygiene & Handwashing		
Medical Rinsing / Tools		
Toilet Sanitation Contingency		

8. WATER SYSTEM MANAGEMENT ACTIONS

Action / Missing Supplies to Acquire	Assigned Person	Target Date	Done

CRITICAL LIFE SAFETY REGULATION AND AUTHORITATIVE COMPLIANCE REGISTER

LEGAL AND COMPLIANCE DISCLAIMER NOTICE: THIS WORKSHEET FUNCTIONS STRICTLY AS AN INDEPENDENT PLANNING AID AND ESTIMATION MATRIX BLUEPRINT. IT DOES NOT CONSTITUTE PROFESSIONAL SANITARY ENGINEERING CONTRACTING, CERTIFIED CLINICAL ADVICE, MEDICAL HYDRATION DIAGNOSIS, OR OFFICIAL LOCAL LAWS. WATER RECOVERY PROTOCOLS, CHEMICAL COMPOSITION RISKS, AND CIVIL BOIL-WATER ORDERS ALTER IMMEDIATELY WITHOUT NOTICE WINDOWS. IN THE EVENT OF DISRUPTION SPREADS OR SYSTEM TOXICITY HAZARDS, USER IS ORDERED TO SUSPEND PRIVATE ESTIMATES AND REFER DIRECTLY TO MANDATES PROGRESSED BY AUTHORITATIVE HEALTH CORPS, INCLUDING THE US ENVIRONMENTAL PROTECTION AGENCY (EPA), THE CENTERS FOR DISEASE CONTROL AND PREVENTION (CDC), THE FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA), LOCAL COUNTY HEALTH DEPARTMENTS, OR LOCAL MUNICIPAL UTILITY OPERATORS.
