TR-10 // HOME EMERGENCY PREPAREDNESS

1. PHASE ALPHA: ZERO-HOUR HOUSEHOLD FORTIFICATION ('OMG THE GRID JUST DROPPED!!!')

■ **THE PERIMETER BARRIER HARDENING:** Close external doors flush and throw heavydeadbolts. Flip all window latches to locked. Insert steel pins into sliding tracks. Close all heavy light-blocking curtains completely.

■ **THE EMERGENCY CORRIDOR LIGHT STAGING:** Place battery-powered LED lanterns or glow sticks flat on the floor along the walls in primary hallways and stairwells. This illuminates paths without throwing light outside.

2. PHASE BRAVO: LONG-TERM 30-DAY STRUCTURAL AUDIT & MAINTENANCE

■ **THE 30-DAY DETECTOR AUDIT SEQUENCE:** On the first day of every month, press and hold the integrated physical test button on every smoke alarm and carbon monoxide detector for 5 seconds. Verify audible siren sounds at full volume.

■ **EXTRACTION DISPLACEMENT TESTING:** Confirm small mechanical pressure gauge needle sits squarely inside green operational section. Shake cylinder upside down twice to fluff suppressant powder.

■ **WEATHERSTRIPPING PROTECTION REPAIR:** If you see light or feel air drafts passing through gaps, fill the space immediately with adhesive foam weatherstripping tape.

CRITICAL PANEL / REFERENCE REGISTER
Carbon monoxide is a lethal, invisible, odorless chemical byproduct of combustion. Never operate alternative open-flame heaters inside unventilated interior living rooms. Test all safety systems routinely to ensure performance.
