NOTES

1. Node circuits: OC-3 (MPLS) (N1, N2, N5, N7 on 10 Gb wavelengths).
2. Each node: collectors, sensor interfaces and communications equipment in the node collector room. See NODE-001.
3. Site A terminal equipment in row C. Backbone per NET-001.
4. Site B linked by 10 GB WAVELENGTH. Quarterly switchover per SITE-B-002.
5. Node LANs 10.1.n.0/24 (n = node number).
6. Provider MPLS service between all sites; circuits shown as logical links.
7. Collected data spooled at the node and transferred per SWA-002.
8. Circuit IDs as issued by the carrier are kept in INV-002.
