REVISIONS

REV	DATE	DESCRIPTION	BY	APPR
B	06 MAY 1998	Transfer state model.	ET	MV
A	16 OCT 1997	Initial issue. Regional transfer contract: spool, transfer, commit verification.		

NOTES

1. A spooled batch is deleted at the node only after Site A returns a verification receipt (record count and checksum match).
2. Each batch moves QUEUED, SENDING, SENT, VERIFIED, RELEASED. A failed send or missing receipt goes to RETRY; after 12 tries the batch is HELD and the watch floor is alerted.
3. Transfer interval 15 min.
4. Node spool holds at least 14 days at full collection rate. Recovery by dial-up was manual (NET-002) until replaced by MPLS paths.
5. Software architecture per SWA-001.
