**REVISIONS**

| REV | DATE | DESCRIPTION | BY | APPR |
|---|---|---|---|---|
| C | 11 SEP 2000 | Transfer schedule for DS3 links. | TA | RS |
| B | 06 MAY 1998 | Transfer state model. | | |
| A | 16 OCT 1997 | Initial issue. Regional transfer contract: spool, transfer, commit verification. | | |

## NOTES

1. A spooled batch is deleted at the node only after Site A returns a verification receipt (record count and checksum match).
2. Each batch moves QUEUED, SENDING, SENT, VERIFIED, RELEASED. A failed send or missing receipt goes to RETRY; after 12 tries the batch is HELD and the watch floor is alerted.
3. Transfer interval 5 min (DS3 and faster links).
4. Node spool holds at least 14 days at full collection rate. Recovery by dial-up was manual (NET-002) until replaced by MPLS paths.
5. Software architecture per SWA-001.
