REVISIONS

REV	DATE	DESCRIPTION	BY	APPR
D	04 FEB 2008	Compression on node links.	SP	CD
C	11 SEP 2000	Transfer schedule for DS3 links.		
B	06 MAY 1998	Transfer state model.		
A	16 OCT 1997	Initial issue. Regional transfer contract: spool, transfer, commit verification.		

NOTES

1. A spooled batch is deleted at the node only after Site A returns a verification receipt (record count and checksum match).
2. Each batch moves QUEUED, SENDING, SENT, VERIFIED, RELEASED. A failed send or missing receipt goes to RETRY; after 12 tries the batch is HELD and the watch floor is alerted.
3. Transfer interval 5 min (DS3 and faster links).
4. Batches compressed before transfer.
5. Node spool holds at least 14 days at full collection rate. Recovery by dial-up was manual (NET-002) until replaced by MPLS paths.
6. Software architecture per SWA-001.
